C# and Advanced .NET

1. What does ConfigureAwait(false) do?

A) It cancels the task.

B) It forces a new thread.

C) It avoids resuming on the captured synchronization context.

D) It makes the call synchronous.

And : C

2. Which HTTP status means Too Many Requests?

A) 404

B) 429

C) 409

D) 422

And : B

3. A team reviewing a design (case 3) asks: What does ConfigureAwait(false) do? Choose the most precise answer.

A) It cancels the task.

B) It forces a new thread.

C) It makes the call synchronous.

D) It avoids resuming on the captured synchronization context.

And : D

4. A team reviewing a design (case 4) asks: Which HTTP status means Too Many Requests? Choose the most precise answer.

A) 429

B) 404

C) 409

D) 422

And : A

5. A team reviewing a design (case 5) asks: What does ConfigureAwait(false) do? Choose the most precise answer.

A) It avoids resuming on the captured synchronization context.

B) It cancels the task.

C) It forces a new thread.

D) It makes the call synchronous.

And : A

6. A team reviewing a design (case 6) asks: Which HTTP status means Too Many Requests? Choose the most precise answer.

A) 429

B) 404

C) 409

D) 422

And : A

Data and Angular

7. What does a covering index include?

A) Every column in the table.

B) Only the primary key.

C) All columns a query needs, avoiding key lookups.

D) A hash of each row.

And : C

8. Which RxJS operator ignores new emissions while an inner observable runs?

A) exhaustMap

B) switchMap

C) mergeMap

D) concatMap

And : A

9. A team reviewing a design (case 9) asks: What does a covering index include? Choose the most precise answer.

A) Every column in the table.

B) All columns a query needs, avoiding key lookups.

C) Only the primary key.

D) A hash of each row.

And : B

10. A team reviewing a design (case 10) asks: Which RxJS operator ignores new emissions while an inner observable runs? Choose the most precise answer.

A) exhaustMap

B) switchMap

C) mergeMap

D) concatMap

And : A

11. A team reviewing a design (case 11) asks: What does a covering index include? Choose the most precise answer.

A) All columns a query needs, avoiding key lookups.

B) Every column in the table.

C) Only the primary key.

D) A hash of each row.

And : A

12. A team reviewing a design (case 12) asks: Which RxJS operator ignores new emissions while an inner observable runs? Choose the most precise answer.

A) switchMap

B) mergeMap

C) concatMap

D) exhaustMap

And : D

Architecture and Security

13. What does the outbox pattern guarantee?

A) Exactly-once delivery everywhere.

B) No broker is needed.

C) Messages are never duplicated.

D) Events are published at least once alongside the state change.

And : D

14. Which flow should an SPA use for sign-in today?

A) Authorization Code with PKCE

B) Implicit flow

C) Password grant

D) Basic auth

And : A

15. A team reviewing a design (case 15) asks: What does the outbox pattern guarantee? Choose the most precise answer.

A) Exactly-once delivery everywhere.

B) Events are published at least once alongside the state change.

C) No broker is needed.

D) Messages are never duplicated.

And : B

16. A team reviewing a design (case 16) asks: Which flow should an SPA use for sign-in today? Choose the most precise answer.

A) Authorization Code with PKCE

B) Implicit flow

C) Password grant

D) Basic auth

And : A

17. A team reviewing a design (case 17) asks: What does the outbox pattern guarantee? Choose the most precise answer.

A) Exactly-once delivery everywhere.

B) No broker is needed.

C) Messages are never duplicated.

D) Events are published at least once alongside the state change.

And : D

18. A team reviewing a design (case 18) asks: Which flow should an SPA use for sign-in today? Choose the most precise answer.

A) Authorization Code with PKCE

B) Implicit flow

C) Password grant

D) Basic auth

And : A
